

# FRANKING MACHINE

## **Fn Series 9**

Franking redefined. High speed combined with precision, state-of-the-art equipment and unique technology. Innovative, reliable, powerful.

# FRAMA Fn Series 9

## INNOVATIVE AND POWERFUL

**Fn Series 9 - innovative.**  
**The powerful solution for modern and professional looking business mail.**

### Outstanding features for your mailroom

The Fn Series 9 offers you maximum performance and productivity. Thanks to the automatic mixed mail feeder, a wide variety of formats, especially your daily mail, can be processed quickly. The precise, dynamic scale automatically determines the exact postage value based on size and weight while the mail is being processed.

Extremely flexible: For oversized envelopes and letter exceeding 16mm in thickness, the Fn Series 9 automatically dispenses a label that can be conveniently affixed to the mail piece.

Intuitive touch screen operation and easy access to the mail transport system increase the effectiveness and efficiency of your mail processing. The use of the Fn Series 9 thus represents an important investment in the future for every modern mailroom.

Frama pursues the goal of developing solutions that combine efficiency, high quality and a high degree of environmental compliance. All products and services meet international quality standards.

### Product highlights Fn Series 9

#### Dynamic scale

The use of the dynamic scale significantly simplifies mail processing. Each item is individually weighed and measured. The postage is thus calculated again for each item. This is an efficient way to avoid incorrect franking.

#### Automatic feeding

The automatic feeder with fully automatic adjustment of the letter thickness (mixed mail feeding) processes all letter formats from C6 to B4 and seals them on request. Just put it on, do not adjust anything.

#### OLS Softwareupdates

The Frama OLS data center automatically updates, ensuring that your Fn Series 9 is always stays up to date.

Illustrations may show optional equipment.

## THE OVERVIEW

### Overview

- Integrated scale
- External scale
- Mix-Mail Feeder
- Dynamic scale
- Coloured touch screen
- Function keys
- Keypad with 10 keys
- Label dispenser
- Start/stop function
- Access transport system
- Collecting tray

### External scale

Weighs mail up to 10kg and is therefore ideal for parcels.

### Dynamic scale

Automatically determines the postage for your mailings based on size and weight.

### Mix-Mail Feeder

The feeder automatically adapts to the size and thickness of your mail.

**Function keys**

Simple and efficient selection of the most common functions (franking, weighing, etc.)

**Coloured touch screen**

The clear and coloured touch screen makes it easy for you to operate the franking machine intuitively.

**Label dispenser**

Possibility to provide your mailings with labels. Especially suitable for parcels and larger envelopes.

**Keypad with 10 keys**

Flexible entry of pin codes and number combinations.

**Start/stop function**

Starts and ends the franking process.

**Access to transport system**

A blockage of letters can be cleared within a few steps and in a very short time.

**Collecting tray**

Clever storage of franked mail.

### Recommended field of application

Up to 1'000 letters / day

## Technical data & specifications Fn Series 9

<b>Franking speed</b>	up to 150 letters / minute
<b>Franking speed (with dyn. scale)</b>	up to 95 letters / minute

## ABOUT FRAMA & SERVICE FEATURES

### Learn more about our company and our service

Businesses are becoming increasingly aware of the advantages of introducing digital technology into the workplace to automate many office workflows and processes.

It is our mission to help guide businesses through the digital transformation process to increase efficiencies and productivity rates as well as provide information mobility throughout an organisation.

Frama is noted for its consultative approach and ability to meet the customer's requirement by working with our customer to select the correct solutions and products ensuring we meet the customer's needs. This is what makes Frama one of the most trusted partners for business in this sector.

Frama has the ability to work with businesses and organisations of all sizes and has the flexibility and speed to meet requirements from multi-site requirements, bespoke solutions and specifically secure and efficient packages for home workers.

In today's world the risks of cyber-crime and compliance must also be considered and many legacy workflows leave organisations open to cyber fraud and non-compliance.

For more than 50 years, we have specialized in the development and manufacture of mail processing and secure data management systems. Frama has continued to innovate and to make us the solution provider for all aspects of local and international written business communication when efficiency, integrity, and innovation is required.

Automation usually follows on from the introduction of lower-level digital transformation. These might include digitising priority business processes such as HR, marketing, sales and finance. It may include ensuring email communication is secure using a unique and easy to use encryption service or the introduction of e-signature software or putting in place a basic managed print services (MPS) strategy. One of the main pillars of our approach is to ensure that any automation that is proposed is not only efficient but secure.

### Our promise to you:

- Consultative approach - Ensuring you are provided with the best solution for your business needs liaising with one of our technology specialists
- Customer service - Each new member of staff is inducted through the Frama CareS programme which highlights our commitment to customer service
- Aftersales - Frama recognises that as well as providing high quality products and tailor made solutions the quality of the after sales service is a major factor when deciding on which supplier to partner with
- Service with a familiar voice - Frama provides a UK based service centre trained to the highest standards of customer care via the Frama CareS customer training modules that all staff attend at regular intervals
- Latest technology - high quality products backed by unrivalled after sales service and support. Providing a end-to-end solution for all sizes of business
- Certification - Frama is certified for IT security as per ISO 27001 and FIPS 140-2 Level 3, the highest security requirement for Cryptographic Modules
